Software engineer with three years in production, joining 42 Paris in October 2026 to prepare the RNCP 7 title "Expert en architecture informatique". I build in TypeScript across the stack, from React interfaces to Node APIs and PostgreSQL, and I own the end-to-end test suite that keeps them standing. Looking for a 24-month apprenticeship starting with the January 2027 intake, on frontend, fullstack or QA automation work.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C, C++98, Python, SQL

Frontend: React 18, Next.js, HTML5, CSS, SCSS, Tailwind CSS, design tokens, Redux Toolkit, RTK Query, Formik, Yup, react-i18next

Backend: Node.js, NestJS, Express, REST API design, WebSockets, Socket.io

Data: PostgreSQL, Prisma, MongoDB, relational modelling

Testing: Cypress (109 specs in production), Playwright, Vitest, Jest, React Testing Library, network mocking, fixtures

Infrastructure: Git, CI/CD, GitHub Actions, Docker, Docker Compose, Nginx, Vercel, VPS

Also shipped with: TanStack Table, Recharts, Framer Motion, react-dnd, react-router v6, dayjs

AI tooling: Claude Code daily, Claude API, local model inference (whisper.cpp)

SOFT SKILLS

- **Autonomy:** three years delivering remote, including two years solo for international clients
- **Collaboration:** peer-learning and code review at 42, API contracts agreed with backend teams
- **Debugging:** patient with non-deterministic faults most people write off as flaky

EDUCATION

42 Paris

from Oct 2026

- Preparing RNCP 39774, "Expert en architecture informatique", level 7 (EQF 7)
- Level 14 validated, Work Experience validated, eligible for a 24-month apprenticeship contract

1337, 42 Network

Khouribga, Morocco · 2022 – 2026

- Systems and network programming in C/C++, algorithms, web architecture, relational databases
- Peer-learning, code review and project-based assessment, no lectures

HOBBIES

- **8-ball pool:** advanced player
- **Swimming**

PROJECTS

billing-service · Stripe subscription billing, deployed

TypeScript · Next.js 15 · PostgreSQL · Prisma · Playwright · Vitest · GitHub Actions — billing-service-tau.vercel.app

- Webhook-driven architecture where Stripe is the source of truth and the database is a read model
- Idempotency through a unique constraint on the event id, written inside the same transaction as the state change
- Test suite fires 8 copies of one webhook concurrently and asserts exactly one is processed; Playwright run covers pricing page through Stripe Checkout to an active account

ft_transcendence · real-time multiplayer platform *(42 project)*

Next.js · NestJS · Socket.io · PostgreSQL · Prisma · Docker — github.com/ysahih/PingPong

- Authoritative real-time state synchronisation over WebSockets, with matchmaking and chat channels
- JWT authentication with OAuth 2.0, two-factor and refresh-token rotation; full stack containerised

ft_irc · IRC server written to protocol *(42 project)*

C++98 · BSD sockets · non-blocking I/O — github.com/ysahih/IRC

- Concurrent multi-client server with no networking library: raw sockets, per-channel state, partial-message buffering across reads

Sentra · Electron desktop app with local AI inference

Electron · React · TypeScript · whisper.cpp · Claude API — github.com/ysahih/sentra-challenge

- Whisper running locally and offline with a cloud fallback behind one output contract, streaming to a React UI

WORK EXPERIENCE

Frontend Developer · Im'enSe Aug 2024 – present

React 18 · TypeScript · Tailwind · RTK Query · Cypress · Playwright · GitHub Actions · Agile — 138 merged PRs over 26 months, ~1,500 files

- **Own the end-to-end suite:** 109 Cypress specs covering roughly a thousand assertions, against mocked network and a live dev backend, plus a Playwright suite of 133 tests using route mocking and role-based selectors
- Hardened the Cypress CI workflow with a concurrency group so parallel runs stopped corrupting the shared test backend
- Built the RTK Query data layer: 13 API modules with tag-based cache invalidation across 17 files
- Introduced CSS-variable design tokens into the Tailwind config, now the colour system across 450+ component files
- Built a feature-level component set from Figma specs on top of the internal design system, form fields, status badges, KPI and data cards, shown in an in-app playground route; the status badge was promoted into the shared core library and is imported by 6 screens
- Route-level code splitting, a lazy-loading image component with blur placeholders, and a cache-key fix that stopped filtered result sets collapsing into one entry
- ~1,500 translation keys across 7 locales; 94 custom hooks; 1,538 typed interfaces across 465 files

Freelance Web Developer Dec 2022 – Aug 2024

React · Next.js · Node.js · TypeScript · PostgreSQL · Docker

- Web applications for direct clients, remote and solo alongside the 1337 cursus, owning scoping through deployment

LANGUAGES

- **Arabic:** native · **English:** fluent, working language (C1) · **French:** A2, in progress
